

# PROCESS CAPABILITY

Whether or not you are building a new process plant or just require some on site support to improve efficiency or troubleshoot a system, we have the Process Engineering capability and experience to attend to all of your design and engineering needs.

Our team of Process Engineers have a wealth of experience working in a wide variety of industries.

Our strength is working in partnership with clients to develop projects from conceptual stage through to commissioning. Key to this, is the earliest possible involvement in the development of a project.

From **CONCEPT to COMPLETION** we have the In-House capability and experience to meet all your requirements

Range of **Process Services**:

- Conceptual Design through to detailed process specification, including P&ID / PFD development, mass & energy balances
- Relief Stream design and verification
- HAZOP Leadership
- Area Classification
- Process modelling
- Detailed design of process equipment
- Site support and troubleshooting
- Commissioning and Testing
- DSEAR / COMAH compliance
- SIL assessments
- Equipment data sheets and schedules

The above is a snapshot of our wide range of process capabilities. Please contact us if you require any further information on our process engineering services.
