Specialists in Modular Process Skid Design and Manufacturing

Addison can design, fabricate and supply Process Control Modular Skids and all associated pipework to connect to site utilities

IN HOUSE

Manufacturing by Addison will help you to provide safe, reliable means control for site expansion projects and to suit your needs

From CONCEPT to COMPLETION
EXCELLENCE IN DESIGN

A modular skid is a process system contained within a frame that allows for easy transportation. Individual skids can contain complete process systems and multiple modules can be combined to create larger systems or entire portable plants.

Addison provides the following in-house services:

- Full Engineering Design
- Process Analysis & Development
- Modification of existing plant
- Process Module Fabrication
- Installation & Commissioning

Manufacturing capabilities cover a variety of materials including:

- A106 Carbon Steel
- A333 Low Temperature Carbon
- A316/304 Stainless Steel
- Hastelloy/Incoloy/Inconel

Design and Manufacturing timescales are dependent on the complexity of process systems and material requirements. We will work with you to ensure that your needs are met and provide full post-installation support.
